Introduction:

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

In this regard, we can only emphasize the importance of writing an academic programs and course description to ensure the proper functioning of the educational process.

Concepts and terminology:

Academic Program Description: The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

Course Description: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

Program Vision: An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

Program Mission: Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

Program Objectives: They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

Curriculum Structure: All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

Learning Outcomes: A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

Teaching and learning strategies: They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extra-curricular activities to achieve the learning outcomes of the program.

Approval of the Dean

Program Vision .1

Excellence in the field of geographical studies and scientific research in a way that serves society. The department's vision also stems from the vision of the College of Education for the Humanities and the University in creating a solid base for building students equipped with education and knowledge by preparing them professionally and scientifically to raise the level of the department and college and working to expand and qualify students in a way that meets the international standards of universities.

Program Mission .2

1- The Geography Department is concerned with studying natural and human phenomena and their mutual relationships and determining their characteristics and distribution patterns.

2- The department is keen to provide qualified national cadres trained in the field in various geographical fields and their techniques to contribute to achieving the goals of development plans and meeting the requirements of the labor market.

3- The department is concerned with research and studies carried out by researchers, as well as scientific consultations.

4- Opening training courses in various fields to expand the fields of geographical thought and applications.

5- The department participates in revitalizing the intellectual and cultural movement of geography and works to keep pace with scientific developments that ensure the advancement of geographical sciences.

Program Objectives .3

The objectives of the Geography Department can be divided into two types: -

First: General objectives:

Spreading the spirit of scientific research through which it is possible to build a society capable of dealing with the surrounding environment correctly and soundly.

Second: Special objectives:

1- It is the preparation of scientific cadres specialized in the various branches of geography, who undertake to teach this science in middle, secondary and preparatory schools.

2- Qualifying students and enabling them to advance in the scientific and educational process

according to modern teaching methods in geography.

3- Providing students with the latest scientific developments and keeping pace with their progress in the relationship between geography and other sciences.

4- The Geography Department aims to contribute to the continuous development of improving and improving the quality of education according to scientific standards that are characterized by addressing all problems by graduating students who are proficient in field work, which represents the true laboratory of geography and who are able to interact with various civil and community institutions.

5- Developing intellectual awareness to keep pace with scientific developments in the field of geographical analysis of natural and human phenomena and the mutual relations between them, and linking this to contemporary issues and the needs of society.

6- The department aims to prepare students capable of conducting research and studies as well as the teaching profession.

Program Accreditation .4

nothing

Other external influences .5

There is a sponsor of the program, which is Wasit University / College of Education for Humanities

Program Structure .6

Program Structure	Number of Courses	Credit hours	Percentage	Reviews*
Institution Requirements	5	13	9%	Basic course
College Requirements	17	53	31%	Basic course
Department Requirements	33	111	60%	Basic course

Summer Training	nothing			
Other				

* This can include notes whether the course is basic or optional.

Program Description .7				
Year/Level	Course Code	Course Name	Credit Hours	

Expected learning outcomes of the program .8	
Knowledge	
Providing students in the Geography Department with many knowledge, namely -1 knowledge of the natural and human aspects of the Earth and how to invest resources in it	
Skills	
of the Geography Department with many skills, namely teaching skills using many illustrative means and methods to ensure the delivery of information to students at various stages.	
Ethics	
Providing students with moral and educational values and principles to ensure the educational process and communicating this to students in schools and institutes.	

Teaching and Learning Strategies .9

Graduates of the Department of Geography can use various strategies, namely the method -1 of presentation and the method of discussion, in addition to the use of field surveys of various geographical phenomena.

Evaluation methods .10

Written and oral answers, monthly and daily exams, and the end-of-year exam

Faculty .11

Faculty Members

Academic Rank	Specialization		Special Requirements/Skills (if applicable)		Number of the teaching staff	
	General	Special			Staff	Lecturer
Mr.					8	
Assistant Professor					8	
Teacher					5	3
assistant teacher					11	8

Professional Development

Mentoring new faculty members

. Orienting new faculty members

Adherence to university regulations and instructions

Professional development of faculty members
Developing teaching staff through holding workshops, seminars and training courses inside and outside Iraq

Acceptance Criterion .12
central

The most important sources of information about the program .13
Methodological books and courses approved by the Ministry of Higher Education and Scientific Research, in addition to other scientific sources.

Program Development Plan .14
By attracting scientific competencies from outside Iraq, as well as sending a number of teaching competencies abroad to learn about the latest methods and modern techniques in the various fields of geographical sciences.

Program Skills Outline															
				Required program Learning outcomes											
Year/Level	Course Code	Course Name	Basic or optional	Knowledge				Skills				Ethics			
				A1	A2	A3	A4	B1	B2	B3	B4	C1	C2	C3	C4
2026 -2025		English	Optional												
	The first stage	Weather and climate science Cartography and remote sensing Africa and Australia Science of Earth's surface shapes Educational psychology The history of Iraq and the ancient Arab world Human rights and democracy Computer principles	Basic Basic												

		Foundations of education Arabic Dry regions Biogeography English															
The second phase	The second phase	Applied climatology Applied geomorphology Geography of Eurasia Population geography Secondary education and educational administration Developmental psychology History of the Islamic Arab state Geographic techniques	Basic Basic														

		Hydrology Geography of development and planning Geography of oil and energy Thematic cartography Rural geography English														
third level		Industry geography Agriculture geography Geography of cities Geography of natural resources Geography of the Americas Counseling and mental health Geographic statistics	Basic Basic													

		Teaching curricula and methods The history of Iraq and the modern Arab world Geography of tourism Detailed climatology Soil geography Geographical research methods English													
		Geography of Iraq Political geography Geography of the Arab world Geography of transport, communication and international trade	Basic Basic												

The fourth stage		Geographic thought													
		View and apply													
		Geographic information systems

Applied climatology
2. Course Code:
3. Semester/Year:
The second phase / 2025–2026
4. Date this description was prepared:
1/ 9/ 2023
5. Available attendance forms:
in person
6. Number of study hours (total) / number of units (total):
120/hour, 4/units
7. Name of the course administrator (if more than one name is mentioned with the personal email)
1– A.Dr.. Nasser Wali Freih Al–Rikabi Email: nasirwali@uowasit.edu.iq
8. Course objectives

It aims to know the impact of climatic elements and the phenomena accompanying them on humans and the environmental elements contained in the place in which they are located. Since science has become a small village, the impact of climatic elements in any place reflects their effects on any region in the world. This means that the applied aspects of climate It requires extensive knowledge and knowledge about the world through the exchange of information between departments and institutions concerned with studying past and present climatic characteristics to determine their impact, whether in the present or expected in the future. In addition to using the latest methods to measure the impact of climatic elements on human health, comfort, and activity. Application methods for calculating some elements such as drought and evaporation, as well as according to the water budget	Objectives of the study subject
--	--

9. Teaching and learning strategies

- Interactive lectures and group discussions.
- Reports and drawings for climate lectures
- Using modern climate references and sources to enrich the lecture.
- Using the method of detailed explanation of the lecture topics.
- Use of maps.
- Using the lecture presentation method using a data show device
- Using the practical and applied aspect in measuring some climate elements and phenomena, as well as measuring the impact of climate on human comfort, health, and activity.
- Focus on studying climate change, its causes, effects, and methods of adaptation

10. Course structure

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes		the week
Class performance and exams	Lecture and brainstorming	The development of climatology and applied climate, the most important axes of its study, and the latest studies in this aspect	Informing students about the development of climate science, its most important branches, and the development of applied climate studies	4	October the first ¹
Class performance and exams	Lecture and discussion	Climate and natural environment Climate and terrain From the effect of climatic elements on the surface and the resulting shapes	Focusing on the impact of climate on nature, represented by the effect of heat, precipitation, wind, and snow on the shapes of the Earth's surface.	4	October the first ²
Class performance and exams	Lecture and brainstorming	The effect of climatic elements on soil and water The effect of climate on soil formation The effect of climate on the variation in soil distribution The impact of climate on the forms and	Informing students about how climatic elements affect soil diversity Surface and groundwater resources	4	October the first ³

		characteristics of water resources			
Class performance and exams	Lecture and brainstorming	The effect of climate on natural plants Vegetation varies according to climatic conditions Climatic regions and their compatibility with vegetation regions	Informing students about the importance of studying the impact of climate on plant life	4	October the first ⁴
Class performance, exams and field visits	Lecture and discussion	Measuring climate elements directly through climate stations Measuring devices Development of surface and atmospheric measuring instruments	Focusing on climate stations, measuring devices, and developments in monitoring and controlling climate elements	4	October the second ¹
Class performance and exams Assigning students to calculate evaporation	Standard method Practical application	Methods of measuring some climatic elements Methods for measuring evaporation The importance of its study, its types, causes, and the most important rates of	Explaining the importance of studying evaporation, its effects, and its types	4	October the second ²

n for stations in Iraq		its measurement			
Class performan ce and exams	Standard method Practical application	Drought: its types, causes, forms, effects, and methods of measuring it	Informing students of the importance of studying the phenomenon of drought and its types	4	October the second ³
Class performan ce and exams	Standard method Practical application	Radiation measur ment The most important equations for measuring solar radiation	Focus on the importance of solar radiation, its impact, and daily, seasonal, and annual variation	4	October the second ⁴
Paper exam	theoretical	First month exam, first semester		4	Canon the first ¹
Class performan ce and exams	Standard method practical application	Climate water budget Budget elements Calculation methods	Introduction to the budget and the importance of studying it	4	Canon the first ²
Class performan	Lecture and	Climatic classifications	Identify the most important climate	4	Canon

ce and exams	discussion		classifications		the first ³
Class performance and exams	Lecture and discussion	Köppen classification	Learn about Copen codes Methods of classification according to climatic regions	4	Canon the first ⁴
Class performance and exams	Lecture and brainstorming	Geographic distribution of Köppen climatic regions	Identify the most important climatic regions and their geographical distribution	4	Canon the second ¹
Class performance and exams	Lecture and application	Modern classifications Thonthwaite classification	Identify the most important Thonthwaite climate symbols	4	Canon the second ²
Class performance and exams	Lecture and application	Holder's classification	Learn how to use classification	4	Canon the second ³
Class performance and exams	Lecture and application	Kosen classification	Learn about the use of classification	4	Canon the second ⁴

Paper exam	theoretical	Exam of the second month of the first semester	Essay, objective and applied questions	4	February 1
		Spring break			February 2
Class performance and exams	Lecture and application	Human classifications Climate and human comfort	Identify the impact of climate on human health, comfort, and activity	4	March 1
Class performance and exams	Lecture and application	Climate and human activity	Identify the impact of climate on agriculture, industry, tourism, transportation, trade, and military operations	4	March 2
Class performance and exams	Lecture and brainstorming	Climate, agriculture and industry The effect of climatic elements on plant life, as well as the effect of elements on industries	Identify the impact of climate, crop cultivation, and the establishment of industry	4	March 3
Class performance and exams	Lecture and brainstorming	Climate, trade and transport. The impact of climate on transport routes, vehicles, sea and air transport	Explaining the role of elements in the movement of trade and transportation	4	March 4

Class performan ce and exams	Lecture and brainstorming	Climate, tourism and military operations The most important tourism climatic elements and how climatic elements affect tourism	Identify and explain the impact of climate on the tourism industry and the factors behind its development	4	April¹
Class performan ce and exams	Lecture and application	Climate and health The effect of climatic elements on the environment of diseases Incidence varies according to the seasons	Explaining the relationship of disease incidence and its relationship to climatic elements	4	April²
Paper exam	theoretical	Exam of the first month of the second semester		4	April³
Class performan ce and exams	Lecture and application	Climate and architecture Building design and climate	Explaining the impact of climate on the design of buildings in different environments	4	April⁴
Class performan ce and exams	Lecture and brainstorming	Construction direction Building materials Window capacity	Explaining the effect of climatic elements through the direction of construction, the size of windows, and building materials	4	Mays¹

Class performance and exams	Lecture and application	Climate, alternative energy and energy consumption	Learn about alternative energy sources	4	Mays²
Class performance and exams	Lecture and application	Solar radiation energy, wind energy, and tidal energy	Learn about solar radiation and wind energy	4	Mays³
Class performance and exams	Lecture and application	Calculate the need for heating and cooling	Learn about the variation in energy consumption and methods for calculating it	4	Mays⁴
Paper exam	theoretical	Exam of the second month of the second semester			May 1
		End of year exams			May 2

11. Course evaluation:

The score is distributed out of 100 as follows:

1– The annual pursuit grade is (50) grades, divided into (20) grades for attendance, participation, and activities, and (30) grades for monthly exams.

2– The final written exam score is (50) points.

12. Learning and teaching resources:

	Required textbooks (methodology, if any)
1: Dr. Qusay Abdel Majeed Al-Samarrai and Adel Saeed Al-Rawi, Applied Climatology. 2:D. Ali Saheb Al-Moussawi and Abdul Hassan Madfoun, Applied Climatology, 2011. 3:D. Fadel Al-Hassani and Mahdi Al-Sahhaf, Basics of Applied Climatology. 4: Dr. Qusay Abdel Majeed Al-Samarrai, Climate and Climatic Regions. Ali Hassan Musa, applied climatology Ali Ghanem, applied climatology	Main references (if any)
Bioclimate d. Ali Hassan Musa Climatic regions d. Ali Hussein Al Shalash Ali Hassan Musa's tourist climate	Recommended supporting books and references (scientific journals, reports,).
Journal of the Geographical Society Analytical climate Working climate	Electronic references, website

Strategy	Education strategy collaborative concept planning. ➤ Teaching strategy brainstorming. ➤ Education strategy notes series ➤

Course Structure .10					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	Introducing students to the concept of applied geomorphology	Chapter One:- *Foundations and concepts of applied geomorphology. *The concept of applied geomorphology.	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
2	2	Introducing students to the stages of development of geomorphology and its relationship to other sciences	* Stages of geomorphology development. *The relationship of applied geomorphology to other sciences.	PowerPoint Lecture	test (oral-)
3	2	Introducing students to the modern foundations of applied geomorphology	*The importance of geomorphological information in different areas of life. *Modern foundations of applied geomorphology	PowerPoint Lecture	General questions and discussion
4	2	Teaching students to use measuring devices and geomorphological field work	*Principles of field work in applied geomorphological study. *Field and laboratory geomorphological measuring devices.	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
5	2	Definition of studentsTypes of soils, their different characteristics, and methods of classification	Chapter II:- *Soil - its characteristics - classification	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
6	2	Definition of studentsThe stages of soil development	*Soil - its development - factors affecting it	theoretical, theoretic,	A written test

		and the factors affecting it		abstract, notional, perspective, paper, academic	
7	2	Introducing students to the characteristics Slopes on the Earth's surface and methods of measuring them	Chapter III:- * Slopes of the Earth's surface - measured	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
8	2	Definition of students Types and types of slopes and their most important international classifications	Classification of slopes - the possibilities of use available in them.	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
9	2	Introducing students to the types Forms of movement of materials, assessment of their risks, and methods of processing them on the surface of the Earth	* Classification of the movement of materials on the Earth's surface - assessment of their risks - methods of treating them.	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
10	2	Introducing students to the most important Surface water and methods and techniques for measuring its flow	the fourth chapter:- *Running water - methods for measuring its work	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
11	2	Teaching students Morphometric characteristics, their types, and methods of measuring them	*Morphometric characteristics of surface water	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion

12	2	Definition of studentsTypes of wind and the most important methods of measuring its speed	Chapter V:- * Wind - methods of measuring its work.	PowerPoint Lecture	test (oral-)
13	2	Definition of studentsThe effects of wind on landforms and the way they are formed	* Measure dimensionsDrShapes resulting from the action of the wind.	PowerPoint Lecture	test (oral-)
14	2	Definition of studentsThe most important problems of wind on roads and how to reduce them	*Monitoring the effects of wind and ways to reduce its problems	PowerPoint Lecture	test (oral-)
15	2	Introducing students to the conceptGroundwater and methods for identifying recharge basins	Chapter six:- * Groundwater - methods for determining its recharge basins	PowerPoint Lecture	A written test
16	2	Definition of studentsMethods of determining the direction of its movement and the resulting effects	* Foundations for determining directions of movement - risks resulting from the action of groundwater	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
17	2	Teaching studentsOn the concept of marine coasts, their types and classifications	Chapter VII:- *Coasts of seas, oceans and lakes - their classification - monitoring and measuring their changes	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
18	2	Teaching studentsOn the most important geomorphological factors affecting it	*Monitoring and measuring the geomorphological processes affecting it	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)

19	2	educationStudentsMethods of measuring coastal landforms	*Determine and measure the dimensions of the landforms appearing therein	PowerPoint Lecture	test (oral-)
20	2	educationStudentsMethods, classification of lands, and production of maps	Chapter Eight:- *Evaluation and classification of lands and their completion Geomorphological map	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
21	2	Introducing students to the most importantPrinciples and standards for land classification	*The principles followed - requirements - classification stages	theoretical, theoretic, abstract, notional, perspective, paper,	test (oral-)
22	2	Introducing students to the conceptNatural resources and how to invest them	Chapter Nine:- * Geomorphological applications:- * Natural resources (oil and natural gas reservoirs - coal fields).	theoretical, theoretic, abstract, notional, perspective, paper, academic	A written test
23	2	Definition of studentsThe most important deposits used in construction operations and methods of exploiting them	* Deposits of natural ores and building materials and their detection - and ways to exploit them	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
24	2	Teaching studentsOn the most important narrative projects and methods of classifying them	* Water projects (irrigation projects - dams and reservoirs)	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
25	2	Definition of studentsThe most important sites and	* Determine its optimal placement - its problems	theoretical, theoretic,	General Discussion

		methods chosen to complete these projects	in different environments and its maintenance	abstract, notional, perspective, paper, academic	and Questions
26	2	Definition of studentsThe most important engineering projects and their geomorphological effects	* Engineering projects (roads, railways, airports, vertical construction, ports).	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
27	2	Definition of studentsThe most important sites and methods of selecting them for engineering projects	*The suitability of the land to different environments - ways to address its environmental problems	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
28	2	Definition of studentsThe concept of water harvesting and harvesting methods	*Water resources - harvesting them	theoretical, theoretic, abstract, notional, perspective, paper, academic	A written test
29	2	Definition of studentsMethods of exploiting and evaluating water resources	*Redirecting it - evaluating its uses	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
30	2	Definition of studentsSurface formation and its effects on military operations	Military operations - adapting the terrain's topography to military vehicles	PowerPoint Lecture	test (oral-)
31	2	Definition of studentsThe most important areas and methods of selecting them	* Tourism - suitability of land features -	PowerPoint Lecture	test (oral-)

		for tourism development and knowledge of the most important geomorphological risks	geomorphological risks		
Course Evaluation .11					
Distribution is as follows: 25 marks for monthly and daily exams for the first semester. 25 marks for monthly and daily exams for the second semester. 50 marks for final exams

hours, 11/unit 2	
Name of the teacher (mention them all if there is more than one person). .2	
Name: Dr. Russell Tariq Hassan Email: russelt@uowasit.edu.iq	
Course objectives .3	
Gain a comprehensive understanding of counseling and mental .5 .health Developing students' ability to recognize and analyze subject .6 concepts Enhancing students' scientific thinking skills by analyzing problems .7 that are presented and discussed in the classroom .Building trust and cooperation among students in the classroom .8	Course objectives
Teaching and learning strategies .4	
:Directed towards the teacher Clear explanations: The school will provide clear and concise explanations of psychological • .counseling concepts to enhance understanding • Structured Presentations: Each session will follow a well-organized format, providing .explanations and examples, then moving into student-oriented activities Guided practice: The teacher will lead the class through initial practice exercises, ensuring •	Strategy 1

.that all students understand key concepts before moving on					
:Learner oriented - Interactive activities: The course will include a variety of interactive activities to promote active learning. This may include group discussions, group work, quizzes - Problem-solving exercises: Students will be provided with problem-solving exercises that challenge them to analyze and apply the learned psychological counseling concepts in real-world scenarios - Cooperative Learning: Group work and peer review activities will encourage students to learn from each other, enhancing collaboration and communication skills - Technology integration: Technology can be exploited through interactive whiteboard exercises for collaborative learning, and multimedia resources to enhance participation				Strategy 2	
:Independent education - Schoolwork: Students will be assigned live exercises and activities used to enhance their understanding - Encouraging self-study: The school will provide resources and strategies for independent learning, encouraging students to use self-reflection - Optional activities: Students will have opportunities to participate in optional activities such as presentations, discussions, or creative writing assignments, which will enable them to display their skills in a more creative way				Strategy 3

8. Course objectives	
It aims to provide students with basic information about the geography of development and planning. In addition to providing students with the objectives, characteristics, and importance of development geography, while clarifying the basic terms of the concept of development and planning. The course also aims to introduce students to important terms such as sustainable .development and regional planning In addition to teaching students how to involve the geographer in the development and planning process, providing students with information about the challenges facing development processes at .various levels	Objectives of the study subject
9. Teaching and learning strategies	

- Interactive lectures and group discussions
- Reports and drawings for development and planning •
- .Using modern references and sources to enrich the lecture •
- .Use the method of detailed explanation of the lecture topics •
- .Using maps •
- Using the lecture presentation method using a data show projector to present •
- .development projects in some countries, especially Iraq

Course description form

1 Course Name:	
Natural resources	
Course Code: -2	
Semester/Year: -3	
The third phase / 2025-2026	
Date this description was prepared: -4	
1-9-2025	
Available attendance forms: -5	
In-Person	
Number of study hours (total) / number of units (total): -6	
120/ hour, 3/units	
Name of the course administrator (if more than one name is mentioned with the personal email) -7	
1- Dr. Saddam Razzaq Abood Email: saddamr@uowasit.edu.iq	
Course Objectives -8	
Objectives of the unit	This simplified description provides a road map on the nature of the vocabulary to be taught in the subject of natural resources, the nature of its provision to students and the intended benefit of teaching this subject and the desired objectives, with some ideas and proposals that we hope will advance the reality of the student and inspire him to consider and reflect on the gifts and natural resources available by God Almighty, and the extent of response to preserve those resources from and sustain them in an optimal manner. Introducing students to natural resources and their types. Enabling students to understand the geographical distribution of each natural resource. And access to depleted natural resources, and a statement of the human role in the sustainability of those resources.
Teaching and learning strategies -9	

	- Preparing reports on the geographical distribution of natural resources. - Using the brainstorming method to attract students' attention. - The way to discuss and raise modern topics about natural resources. - Use of maps. - Using the view of the lecture using the data show projector - Preparing reports on the importance of natural resources and ways to preserve them. - Determine which natural resources are most vulnerable to depletion and pollution - The possibility of sustaining natural resources and educating students about the sustainable environment.
--	--

10. Course Structure -10

Week	Hours	Learning outcomes required for the program*	Module or Topic Name	Learning method	Valuation Method
October1	4	Teaching students the definition of natural resources, their importance, the reasons for studying them, as well as their classification.	Definition of natural resources, their importance, reasons for studying them, and methods of studying and classifying them	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
2 October	4	Introducing students to the first natural resource, which is the soil, as well as introducing them to the formation factors represented by the base rock, climate, terrain, living organisms and	Definition of soil and its components	PowerPoint Lecture	test (oral-)

		time.			
October3	4	Introduce students to the physical characteristics of soil, such as color, texture, structure, porosity, permeability, density and temperature.	Soil Characteristics	PowerPoint Lecture	General questions and discussion
October4	4	Introducing students to the most important problems of soil and its relationship to physical characteristics	Soil depletion is a physical problem	PowerPoint Lecture	General questions and discussion
November1	4	Introduce students to the chemical properties of soil reactivity, salinity and fertility.	Soil Characteristics	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
November2	4	Introducing students to the types of soils and studying the types of zonal soils.	Classification of soils, zonal soils.	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
November3	4	Introducing students to what is meant by non-zonal soils and their types.	Classification of soils, non-zonal soils.	theoretical, theoretic, abstract, notional, perspective, paper, academic	Class Performance and Exams

4 November	4	Teaching students to propose successful solutions that address and preserve soil problems.	Soil Maintenance	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
December1	4		First Month First Semester Examination	theoretical, theoretic, abstract, notional, perspective, paper, academic	examine
December2	4	Introducing students to soil in Iraq in terms of its types and distribution.	Soil in Iraq.	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
December3	4	Introducing students to the concept of natural plant and the factors affecting it, such as climate, soil, terrain and water.	The concept of natural plant. and factors influencing it.	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
December4	4	Introducing students to the importance of forests, their problems, their effects, and ways to maintain them.	Forests, their importance, problems, implications, methods of forest conservation.	PowerPoint Lecture	test (oral-)
January1	4	Teaching students to classify forests according to location and prevailing climatic conditions.	Classification of forests.	PowerPoint Lecture	test (oral-)

January2	4	Introducing students to the types of weeds from savannah, wilderness and stubbs.	Weeds, their types	PowerPoint Lecture	test (oral-)
January3	4		Second Month Exam Semester 1	theoretical, theoretic, abstract, notional, perspective, paper, academic	A written test
January4	4	Introducing students to the animal resources that live on land and in water bodies.	Animal resources	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
February1	4	Introducing students to the water cycle, its elements and its importance.	Water resources (water cycle in nature)	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
February2			Spring break.		
March1	4	Introducing students to freshwater types such as rivers, glaciers and lakes.	- Yeah. - Mm-hmm. - Fresh water.	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
March2	4				

March3	4	Teaching students the physical and chemical properties of the waters of the seas and oceans.	:: Oceans and seas	PowerPoint Lecture	test (oral-)
March4	4	Familiarize students with the problems faced by water resources, especially from scarcity and pollution.	Water resources	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
April1	4	Introducing students to the water resources in Iraq, especially rivers, lakes, marshes and groundwater.	Water resources in Iraq.	theoretical, theoretic, abstract, notional, perspective, paper, academic	Oral questions and test
April2	4	Introducing students to mineral resources and the factors affecting them.	Mineral resources	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
April3	4		Semester 2 Month 1 Exam	theoretical, theoretic, abstract, notional, perspective, paper, academic	Paper-based exam
April4	4	Introducing students to the origin of metals and methods of their formation.	The origin of metals and the methods of their formation.	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions

Mays1	4	Teaching students to classify metals and focusing here on the group of metallic minerals.	Classification of minerals (group of metallic minerals).	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
Mays2	4		Semester 2 Month 2 Examination	theoretical, theoretic, abstract, notional, perspective, paper, academic	Paper-based exam
Mays3	4		End of year		Written exams

Course Evaluation -11

The score is distributed out of 100 as follows:

1- The annual pursuit grade is (50) grades, divided into (20) grades for attendance, participation, and activities, and (30) grades for monthly exams.

2- The final written exam score is (50) points.

Course description form

1. Course Name:	
Microclimate	
2. Course Code:	
3. Semester/Year:	
The second phase / 2025-2026	
4. Date this description was prepared:	
2025 /10 /1	
5. Available attendance forms:	
in person	
6. Number of study hours (total) / number of units (total):	
120/hour, 4/units	
7. Name of the course administrator (if more than one name is mentioned with the personal email)	
1- Asst.Prf.Dr.Nadia Hatem Tuama Email: nadiah@uowasit.edu.iq	
8. Course objectives	
The student became acquainted with the concept of detailed (micro) climate in geographical regions by studying the elements of climate in different locations of cities and countryside, the terrain features of mountains, plains, and coastal areas, and the methods used to measure it. This makes the student able to know the climatic variations within small regions, as well as using the latest methods to measure the impact of climatic elements on .human health, comfort, and activity	Objectives of the study subject
9. Teaching and learning strategies	

- Follow the method of class discussions ○
- Preparing external questions from those sources ○
- Follow up on recent external climate sources and references ○
- Urging students to follow educational series that are presented in video form on .official scientific links ○
- .Conduct daily quick exams with intellectual questions ○
- Conduct a brief report circle in which two or more students participate to study a topic related to the curriculum vocabulary???
- .Use maps and illustrative figures ○
- Practical applications and training students on using devices for field climate • •
- .measurements

10. Course structure

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Class performance and exams	Lecture and discussion	Detailed climate concept	Introducing students to the concept of climate science, its most important branches, and the development of detailed climate studies	4	October the first1
Class performance and exams	Standard method	And its importance	Focus on the most prominent methods of measuring detailed climate indicators	4	October the first2
Class performance and exams	Practical application		Informing students about the factors controlling the creation of a detailed climate within geographical space	4	October the first3
Class performance and exams	Lecture and brainstorming		Features of the detailed climate of deserts	4	October the first4

Class performance and exams	Lecture and brainstorming	Detailed climate measurement methods	Detailed climate features of snow and ice surfaces	4	October the second1
Class performance and exams	Lecture and discussion	Factors controlling the microclimate	Detailed climate features of coastal areas and ways to benefit from this in the tourism industry	4	October the second2
Class performance and exams	Lecture and discussion	Detailed climate of the forest (its importance - the effect of the plant canopy on light and the temperature response of the air and soil)	Detailed climate features of plant canopies and their role in the amount of radiation reaching the bottom of the forest, air temperature, and its vertical expression within the forest.	4	October the second3
Class performance and exams	Lecture and discussion	The effect of forests on atmospheric pressure, wind movement, soil and air moisture, evaporation, condensation, and rain	The effect of the forest on climate variables such as wind movement, direction, speed, condensation, evaporation, and forms of precipitation.	4	October the second4
Class performance and exams	Lecture and discussion	Exam of the second month of the first semester	Essay, objective and applied questions	4	Canon the first1
		Spring break		4	Canon the first2
Written exam	Practical application	Detailed climate of field crops	Identify the detailed climate of field crops of all types, summer and winter	4	Canon the first3
Class performance and exams	Lecture and discussion	Detailed climate of windbreaks (the concept of windbreaks, their importance and	Learn about the concept of windbreaks, their characteristics, and their importance	4	Canon the first4

		characteristics)			
Class performance and exams	theoretical	Types of windbreaks	Identify the types of windbreaks	4	Canon the second1
Class performance and exams	Lecture and discussion	The effect of windbreaks on solar radiation, air temperature, and wind movement	Explaining the role of windbreaks and their impact on climate elements such as radiation, heat, and wind	4	Canon the second2
Class performance and exams	Lecture and brainstorming	The effect of windbreaks on atmospheric humidity, evaporation, transpiration, condensation and precipitation	Identify the role of windbreaks on humidity, evaporation, transpiration, and forms of condensation and precipitation	4	Canon the second3
Class performance and exams	Lecture and discussion	Detailed climate of mountainous areas	Identify the detailed climate of the mountainous regions and the valleys adjacent to them	4	Canon the second4
Written exam		Exam of the first month of the second semester	Essay, objective and applied questions	4	February1
	Lecture and discussion	Detailed climate of aquatic and barren surfaces	Identify the detailed climate of water surfaces and explain it to barren lands		February2
Class performance and exams	Lecture and discussion	Detailed climate of cities (factors that shape the city's climate and the controls controlling it)	Explaining the factors that shape the climate within the city, its impact, and the controls controlling it	4	March1

Class performance and exams	theoretical	The heat island, its formation factors, and measuring its intensity	Learn about the concept of thermal damage, how it is formed, and ways to measure its intensity mathematically	4	March2
Class performance and exams		Detailed climate of the countryside	Identify the detailed climate of rural areas adjacent to cities	4	March3
Class performance and exams	Lecture and application	Detailed climate for cars	How the climate is shaped by the type of car, its speed, traffic congestion, the color of the car, and the type of fuel used	4	March4
Class performance and exams	Lecture and discussion	Exam of the second month of the second semester	Essay, objective and applied questions	4	April1
Class performance and exams	Lecture and brainstorming	End of year exams	Essay, objective and applied questions	4	April2
Written exam	Lecture and brainstorming	Detailed climate of the forest (its importance - the effect of the plant canopy on light and the temperature response of the air and soil)	Features of the detailed climate of deserts	4	April3
Class performance and exams	Lecture and brainstorming	The effect of forests on atmospheric pressure, wind movement, soil and air moisture, evaporation, condensation, and rain	Detailed climate features of snow and ice surfaces	4	April4
Class performance and exams	Lecture and brainstorming	Exam of the second month of the first semester	Detailed climate features of coastal areas and ways to benefit from this in the tourism	4	Mays1

			industry		
Class performance and exams	theoretical	Spring break	Detailed climate features of plant canopies and their role in the amount of radiation reaching the bottom of the forest, air temperature, and its vertical expression within the forest.	4	Mays2
Class performance and exams	Lecture and brainstorming	Detailed climate of field crops	The effect of the forest on climate variables such as wind movement, direction, speed, condensation, evaporation, and forms of precipitation.	4	Mays3
Class performance and exams	Lecture and brainstorming	Detailed climate of windbreaks (the concept of windbreaks, their importance and characteristics)	Essay, objective and applied questions	4	Mays4
Written exam	Standard method	Types of windbreaks		4	May 1
Written exam		The effect of windbreaks on solar radiation, air temperature, and wind movement	Identify the detailed climate of field crops of all types, summer and winter	4	May 2

11. Course evaluation:

The score is distributed out of 100 as follows:

1- The annual pursuit grade is (50) grades, divided into (20) grades for attendance, participation, and activities, and (30) grades for monthly exams.

2- The final written exam score is (50) points.

12. Learning and teaching resources:

	Required textbooks (methodology, if any)
Detailed climate :1 Microclimate :2 Local climate :3	Main references (if any)
Al-Wajeez in the detailed climate	Recommended supporting books and references (scientific journals, reports,).
Journal of the Geographical Society Analytical climate Iraqi academic journals (humanitarian journals)	Electronic references, website

1- Course Name:

Oil & Energy

2- Course Code:;

3. Semester/Year:

The second phase / 2025–2026

4. Date this description was prepared:

2025 /10 /1

5. Available attendance forms:

in person

6. Number of study hours (total) / number of units (total):	
120/hour, 4/units	
7. Name of the course administrator (if more than one name is mentioned with the personal email)	
1- M. Mohamed Latif Fathih	Email: <u>mfdheeh@uowasit.edu.iq</u>
3- Course Objectives	
Objectives of the unit	Introducing students to renewable and non-renewable energy sources and the most important features and problems of these sources and enabling students to understand the geographical distribution of energy sources and the most important producing and consuming countries, as well as identifying the importance of energy sources and their relationship to industrial human activities, whether civil or military, and access to depleted energy sources such as oil and natural gas, and explaining the human role in the sustainability of these resources and the extent of global political tension because of them, and enabling students to identify any source of more pollution or depletion in Iraq, the Arab world and the world, and whether it is possible to reduce the impact of its impact, and explaining the international treaties and conferences that have been established in this regard and familiarizing students with the problems faced by the exploitation of energy sources and the natural and human factors that prevent this
4- Teaching and learning strategies	

	• Interactive lectures and group discussions. • Reports and fees for energy lectures • Using modern references and sources to enrich the lecture with regard to energy sources. • Using the method of detailed explanation of the lecture topics and asking questions. • Using maps and explanatory means. • Use the presentation for the lecture using the data show projector. • Focus on the study of clean sources of energy, causes, effects, methods of exploitation and the importance of universality.
--	---

5– 10. Course Structure

Week	Hours	Learning outcomes required for the program*	Module or Topic Name	Learning method	Valuation Method
October the first¹	2	Enabling the student to define energy, its importance and the reasons for studying it, as well as its classification	Definition and Importance of Energy	Lecture and Brainstorming	Class Performance and Exams
October the first²	2	Introducing students to energy sources and introducing them to the natural and human factors affecting them .	Power Sources	Lecture and Discussion	Class Performance and Exams
October	2	Introducing students to non-	Non-renewable energy sources , oil	Lecture and Brainstorming	Class Performance

the first ³		renewable energy sources .		ng	and Exams
October the first⁴	2	Introducing students to the geographical factors affecting the exploitation of energy sources.	Geographical factors affecting the exploitation of energy sources	Lecture and Brainstorming	Class Performance and Exams
October the second¹	2	Introducing students to oil and theories of its formation.	Oil and its formation theories	Lecture and Discussion	Class Performance , Exams and Field Visits
October the second²	2	Introducing students to geographical distribution, not oil products	Geographical distribution of oil production in the Arab world and globally and the advantages of each	Lecture and discussion	Class Performance and Exams Assign students to calculate evaporation for stations in Iraq
October the second³	2	Introducing students to how to extract oil	First month Chapter 1	theoretical, theoretic, abstract, notional, perspective, paper, academic	examine
October the	2	Introducing students to the	oil exploration, extractio	Lecture and Discussion	Class Performance

second 4		stages of oil extraction	n, oil transportation, export		and Exams
Canon the first1	2	Teaching students about types of oil	Oil derivatives and their importance as an energy source		
Canon the first2	2	Introducing students to the strategic importance of oil	The role of oil in economic growth and its environmental effects	Lecture and Discussion	Class Performance and Exams
Canon the first3	2	Introducing students to oil industries.	Oil refinery	Lecture and Discussion	Class Performance and Exams
Canon the first4	2	Introducing students to oil industries.	Petrochemical Industries	Lecture and Discussion	Class Performance and Exams
Canon the second 1	2	Introducing students to oil industries.	Second month Chapter 1	theoretical descriptive	UNTRANSLATED_CONTENT_START امتحان ورقي UNTRANSLATED_CONTENT_END

Canon the second 2	2	Introducing students to natural gas	Natural gas continued to form	Lecture and Discussion	Class Performance and Exams
Canon the second 3	2	Introducing students to natural gas	Natural Gas Components, Importance and Uses	Lecture and Discussion	Class Performance and Exams
Canon the second 4	2	Introducing students to natural gas	Production of Natural Gas.	Lecture and Discussion	Class Performance and Exams
Februa ry1	2	Introducing students to natural gas	Global and Arab Natural Gas Reserves		
Februa ry2			Spring break.		
March 1	2	Introducing students to renewable energy	Renewable Energy	Lecture and Discussion	Class Performance and Exams
March 2	2	Solar energy education for students	Semester 2 Month 1 Exam	theoretical, theoretic, abstract,	Paper-based exam

				notional, perspective, paper, academic	
March 3	2	Solar energy education for students	The importance of solar energy, its advantages and obstacles to its exploitation	Lecture and Brainstormi ng	Class Performance and Exams
March 4	2	Solar energy education for students	Geographical distribution of global and Arab production and consumption of solar energy	Lecture and Brainstormi ng	Class Performance and Exams
April1	2	Introducing wind energy to students	Wind energy, its features and determinants	Lecture and Brainstormi ng	Class Performance and Exams
April2	2	Introducing wind energy to students	Geographical distribution of global and Arab wind energy production and consumption	Lecture and Discussion	Class Performance and Exams
April3	2	Introducing students to hydrological energy	Hydrological energy and its advantages and characteristics		
April4	2	Introducing students to hydrological energy	Semester 2 Month 2 Examination	theoretical, theoretic, abstract, notional, perspective, paper, academic	examine
Mays1	2	Nuclear energy education for students	Nuclear energy	Lecture and Discussion	Class Performance

					and Exams
Mays²	2	Nuclear energy education for students	Areas of use of nuclear energy	Lecture and Discussion	Class Performance and Exams
Mays³	2	Introducing the student to bioenergy	Energetic Power ?	Lecture and Discussion	Class Performance and Exams
Mays⁴	2	Introducing the student to bioenergy	Types and importance of bioenergy and its areas of use	Lecture and Discussion	Class Performance and Exams
May 1	2	Teaching students about international treaties and organizations related to energy	International Energy Organisations		
May 2	2		End of year		

11- Course Evaluation

Distribute the score out of 100 according to the following agreement:

- 1-The degree of annual pursuit of (50) degrees and divided into (20) degrees of attendance, participation and activities and (30) degrees of monthly examinations.
- 2-The final written exam score is (50) marks.

• • •	To be familiar with using different statistical methods and extrapolating statistical results Know the analysis and management of : B2 statistical results Finding correlations between dependent -3 B

	and independent variables To learn how to deal with different -B4 .statistical methods
9. Teaching and learning strategies	

10- Course structure					
Evaluation method	Teaching method	Name of the unit/topic	learning Required outcomes	hours	the week
Daily tests	Explanation by adopting white Powered	The concept of statistics, types of data, types of statistics	The student gets to know the concept of statistics	2	1
Daily tests	Explanation by adopting white Powered	Steps of the scientific method, description of the research environment and conditions, data collection, data presentation, and data analysis	about the Learn statistical method	2	2
Daily tests	Explanation by adopting white Powered	Data collection, data sources, methods of obtaining data	The student learns about the sources of data collection	2	3
Daily tests	Explanation by adopting white Powered	Comprehensive survey, sampling method, questionnaire	For the student to know the methods of collecting data	2	4

Daily tests	Explanation by adopting white Powered	Classification and tabulation of data, temporal tabulation, geographic tabulation	The student learns about methods of classifying and tabulating data	2	5
Daily tests	Explanation by adopting white Powered	Quantitative tab, descriptive tab, graphical display of unclassified data	For the student to become familiar with methods of classifying data	2	6
Daily tests	Explanation by adopting white Powered	Data distribution display, tabular display of .data	The student learns about ways to display data	2	7
Daily tests	Explanation by adopting white Powered	Frequency distribution, proportional frequency distribution, binary frequency) distribution (paired	The student will know the types of frequency distribution	2	8
Daily tests	Explanation by adopting white	Graphical display of tabulated data	The student learns about ways to display data	2	9

	Powered				
Daily tests	Explanation by adopting white Powered	Practical applications for displaying data	The student will practice applying graphical presentation of data	2	10
Daily tests	Explanation by adopting white Powered	Statistical samples Basic concepts Sample selection stages	For the student to become familiar with statistical samples	2	11
Daily tests	Explanation by adopting white Powered	Types of samples Sample volume The extent to which it represents the study population		2	12
Daily tests	Explanation by adopting white Powered	Measures of central tendency The arithmetic mean of tabulated data The	The student will be familiar with the measures of central tendency	2	13

		arithmetic mean of ungrouped data			
Daily tests	Explanation by adopting white Powered	Median for classified data Median for unclassified data, mode	The student gets to know the medium and mode	2	14
Daily tests	Explanation by adopting white Powered	Practical applications of measures of central tendency	For the student to apply	2	15
Daily tests	Explanation by adopting white Powered	Measures of dispersion and dissimilarity Introduction to the most important metrics Term	For the student to become familiar dispersion with measures	2	16
Daily tests	Explanation by adopting white Powered	Standard deviation of tabulated data Standard deviation of ungrouped	For the student to know the standard deviation	2	17

		data			
Daily tests	Explanation by adopting white Powered	Practical applications of standard deviation	To apply the good deed	2	18
Daily tests	Explanation by adopting white Powered	Variance for tabulated data Variance for ungrouped data	For the student to recognize contrast	2	19
Daily tests	Explanation by adopting white Powered	Practical applications of contrast	For the student to apply	2	20
Daily tests	Explanation by adopting white Powered	The standard score, its importance, use, and method of calculating it	For the student to know the standard grade	2	21
Daily tests	Explanation by adopting white Powered	Standard grade practical applications		2	
Daily tests	Explanation by adopting white	Correlation, its concept and types	For the student to recognize the connection	2	22

	Powered				
Daily tests	Explanation by adopting white Powered	Linear correlation Definition of linear correlation coefficient Calculating methods for classified data and unclassified data Pearson correlation coefficient	Applications of the standard score process, methods for calculating correlation	2	24
Daily tests	Explanation by adopting white Powered	Correlation of descriptive variables Rank correlation coefficient	For the student to recognize the correlation of ranks	2	25
Daily tests	Explanation by adopting white Powered	Spearman correlation coefficient Kendall's correlation coefficient	Spearman's correlation coefficient and Kendall's correlation	2	26
Daily tests	Explanation by	Attribute correlation	The student gets to know the	2	27

Course description form

1.	Course Name:
Agriculture geography	
2.	Course Code:
3.	Semester/Year:

4. Date this description was prepared:

2025 /10 /1

5. Available attendance forms:

in person

6. Number of study hours (total) / number of units (total):

120/hour, 4/units

7. Name of the course administrator (if more than one name is mentioned with the personal email)

1– A.Dr.. Shakir msear lafta

Email: shmsear@uowasit.edu.iq

8. Course objectives

A- Cognitive objectives

A1- Informing students about the importance of agricultural geography

A2- Identify the problems of agricultural geography and develop solutions to address them

A3- Linking the problems of agricultural geography to

Objectives of the study subject

natural and human factors

A4- Addressing the problems facing agricultural production

A5- Knowledge of modern techniques used in agricultural geography

B - The program's skill objectives

B1 - Drawing maps of agricultural lands and determining agricultural areas

B2 - Field study of agricultural problems and development of realistic solutions for them

B3 - Classification of agricultural lands according to their productive potential

9. Teaching and learning strategies

Interactive lectures and group discussions.

- Reports and drawings for agricultural lectures
- Using modern agricultural references and sources to enrich the lecture.
- Use the method of detailed explanation of the lecture topics.
- Using maps.
- Use the lecture presentation method using a data show device
- Focus on studying agricultural change, its causes, effects, and methods of adaptation

10. Course structure

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes		the week
Class performance and exams	Lecture and brainstorming		The concept of agricultural geography and its relationship with other sciences	4	October the first ¹

Class performance and exams	Lecture and discussion		The emergence and spread of agriculture	4	October the first²
Class performance and exams	Lecture and brainstorming		Agriculture characteristics	4	October the first³
Class performance and exams	Lecture and brainstorming		Characteristics of agricultural production	4	October the first⁴
Class performance, exams and field visits	Lecture and discussion		Geographical factors affecting agriculture	4	October the second¹

1. Educational Institution	Wasit University/College of Education for Human Sciences
2. scientific department	Geography

3. Course Code:	Tourist Geography/ Phase III
4. Available Attendance Forms:	Daily
5. Term / Year: Annual	2025/2025
6. Number of study hours (total)	2 hours per week
7. Description Preparation Date	1/10/2025
8. Course Objectives	
- Knowledge of the concept and definition of tourist geography and its diversity	
- Studying research methods in tourism geography.	
- Studying tourism geography and comparing it to tourism in the countries of the world .	
- Knowledge of the concept of tourism, schools in their diversity and forms, tourism organizations and their impact on the development of the country's economy.	
- Making students able to understand tourism, its stages, investment and laws.	
- Identify the natural and human factors and their impact on the strength and development of the state.	
- Identify the environmental effects of the problems facing tourism .	
- Studying tourism in terms of its concepts, elements, development, forms and theories .	
- Studying the tourism industry and its role in the country's economy.	
- Introducing the student to tourism and the theories of tourism originated.	

9. Course Outcomes and Teaching, Learning and Evaluation Methods

A- Knowledge Objectives A1- Enabling students to use scientific means (data show) to show films and lectures A2- Identifying the tourist geography. A3-The student should be acquainted with the importance of studying natural and human factors and their impact on the development of the arena. A4-Developing Talib's ability to develop tourism and solve environmental problems that hinder the advancement of tourism. A5- Introducing students to the role of tourism and its political, economic and social effects. A6- Developing the student's ability to know the types of tourism, its theories, industry and investment. A7- Developing the student's abilities to know the tourism environment, the most important tourist countries and the types of transport necessary for tourism. A8- Making the student able to face the tourist problems, roads and programs necessary for their development.
B - Course Skills Objectives B1- Organizing education regarding the geography of tourism. B2-Empowering the student to build a future vision towards understanding tourism conflicts. B3-To be able to prepare reports and research on the geography of tourism. B4-Enabling the student to understand the difference between natural and human factors affecting tourism. B5-Developing the student's ability through the skills of feedback on the required subject.
Teaching & Learning
1- Lecture Method 2- Presentation Presenting the problem and how to find solutions to it. 3- method (discussion-) 4- Questionnaire method 5- Focus on a comparative approach to communicating information to the student 6- Encourage students to self-learn 7- Enabling the student to use modern methods in the lecture (Dato 'Show).

Evaluation Method
- Daily and monthly scientific tests. - Oral and written tests. - Quarterly and final tests.
C- Emotional and value objectives C1- Developing an educated conscious generation and instilling patriotism and patriotism in it. 2- Deepening the student's understanding of the importance of tourism and how to preserve its institutions and tourist monuments. C3-Raising the student's awareness of the fact that the recreational aspect does not prevail over the scientific aspect and its personal impact is complementary to the other . C4-Confronting the types of terrorism facing the homeland.
Teaching & Learning
- recitation method - method (discussion-) - Method of Live Interrogation. - Regular education. - Urging the student to expand his knowledge in all journals.
Valuation Methods
(a) For daily, monthly, and quarterly scientific tests.

(d) Transferred general and qualifying skills (other skills related to employability and personal development).

D1- Self-education and organized .

D2-Providing continuous education opportunities for students and motivating them to do so.

With a propedeutic certificate of a university degree programme (WO);

D4- Performs work within the jurisdiction

D5- Balanced personality

irresponsible

D7- Its ability to influence and positively affect

10. 10. Course Structure					
Week	Hours	Learning outcomes required for the program*	Module Name/ or Topic	teaching method	Valuation Method
1	2	referred to in the previous axis and each according to the content	Introduction to the Concept and Evolution of Tourism Geography	Delivering, discussing and lively questioning	She takes oral tests.

11. Infrastructure

1- Required textbooks	Introduction to Tourism Geography....Dr. Shawqi Al-Sayed Ahmed Dabi
2- Main References	Tourist geography and its applications to the Arab world ...Dr. Ibrahim Khalil Bazazo
أ) Recommended books and references (scientific journals,reports ,.....)	Tourist geography.. For Dr. Mohamed Sobhi Abdel Hakim
ب) Electronic references,websites ,.....	The Internet [23

12. Course Development Plan

- 1- Developing the course by adding about 20-30% new material by keeping pace with modern sources.
- 2- Renewing the curriculum vocabulary according to global developments and changes that have changed the tourist map of the world.
- 3- Delete some old numbers, ratios and statistics.
- 4- To be acquainted with modern tourism theories that are applied nowadays.
- 5- Developing countries in which tourism has developed.
- 6- Following up on events, developments, research and scientific reports that are concerned with tourism
- 7- Follow the latest developments in the tourism arena.

1. Course Name:
Applied climatology
2. Course Code:
3. Semester/Year:
The second phase / 2025–2026
4. Date this description was prepared:
2025 /10 /1
5. Available attendance forms:
in person
6. Number of study hours (total) / number of units (total):
120/hour, 4/units
7. Name of the course administrator (if more than one name is mentioned with the personal email)
1– A.Dr.. Nasser Wali Freih Al–Rikabi Email: nasirwali@uowasit.edu.iq
8. Course objectives

It aims to know the impact of climatic elements and the phenomena accompanying them on humans and the environmental elements contained in the place in which they are located. Since science has become a small village, the impact of climatic elements in any place reflects their effects on any region in the world. This means that the applied aspects of climate It requires extensive knowledge and knowledge about the world through the exchange of information between departments and institutions concerned with studying past and present climatic characteristics to determine their impact, whether in the present or expected in the future. In addition to using the latest methods to measure the impact of climatic elements on human health, comfort, and activity. Application methods for calculating some elements such as drought and evaporation, as well as according to the water budget	Objectives of the study subject
9. Teaching and learning strategies	

- Interactive lectures and group discussions.
 - Reports and drawings for climate lectures
- Using modern climate references and sources to enrich the lecture.
- Using the method of detailed explanation of the lecture topics.
 - Use of maps.
- Using the lecture presentation method using a data show device
- Using the practical and applied aspect in measuring some climate elements and phenomena, as well as measuring the impact of climate on human comfort, health, and activity.
- Focus on studying climate change, its causes, effects, and methods of adaptation

10. Course structure

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes		the week
Class performance and exams	Lecture and brainstorming	The development of climatology and applied climate, the most important axes of its study, and the latest studies in this aspect	Informing students about the development of climate science, its most important branches, and the development of	4	October the first ¹

			applied climate studies		
Class performance and exams	Lecture and discussion	Climate and natural environment Climate and terrain From the effect of climatic elements on the surface and the resulting shapes	Focusing on the impact of climate on nature, represented by the effect of heat, precipitation, wind, and snow on the shapes of the Earth's surface.	4	October the first ²
Class performance and exams	Lecture and brainstorming	The effect of climatic elements on soil and water The effect of climate on soil formation The effect of climate on the variation in soil distribution The impact of climate on the forms and characteristics of water resources	Informing students about how climatic elements affect soil diversity Surface and groundwater resources	4	October the first ³

Class performance and exams	Lecture and brainstorming	The effect of climate on natural plants Vegetation varies according to climatic conditions Climatic regions and their compatibility with vegetation regions	Informing students about the importance of studying the impact of climate on plant life	4	October the first ⁴
Class performance, exams and field visits	Lecture and discussion	Measuring climate elements directly through climate stations Measuring devices Development of surface and atmospheric measuring instruments	Focusing on climate stations, measuring devices, and developments in monitoring and controlling climate elements	4	October the second ¹

Class performance and exams Assigning students to calculate evaporation for stations in Iraq	Standard method Practical application	Methods of measuring some climatic elements Methods for measuring evaporation The importance of its study, its types, causes, and the most important rates of its measurement	Explaining the importance of studying evaporation, its effects, and its types	4	October the second ²
Class performance and exams	Standard method Practical application	Drought: its types, causes, forms, effects, and methods of measuring it	Informing students of the importance of studying the phenomenon of drought and its types	4	October the second ³
Class performance and exams	Standard method Practical application	Radiation measurement The most important equations for measuring solar radiation	Focus on the importance of solar radiation, its impact, and daily, seasonal, and annual variation	4	October the second ⁴

Paper exam	theoretical	First month exam, first semester		4	Canon the first ¹
Class performance and exams	Standard method practical application	Climate water budget Budget elements Calculation methods	Introduction to the budget and the importance of studying it	4	Canon the first ²
Class performance and exams	Lecture and discussion	Climatic classifications	Identify the most important climate classifications	4	Canon the first ³
Class performance and exams	Lecture and discussion	Köppen classification	Learn about Copen codes Methods of classification according to climatic regions	4	Canon the first ⁴
Class performance and exams	Lecture and brainstorming	Geographic distribution of Köppen climatic regions	Identify the most important climatic regions and their geographical	4	Canon the second ¹

			distribution		
Class performan ce and exams	Lecture and applicatio n	Modern classifications Thonthwaite classification	Identify the most important Thonthwaite climate symbols	4	Canon the second ²
Class performan ce and exams	Lecture and applicatio n	Holder's classification	Learn how to use classification	4	Canon the second ³
Class performan ce and exams	Lecture and applicatio n	Kosen classification	Learn about the use of classification	4	Canon the second ⁴
Paper exam	theoretical	Exam of the second month of the first semester	Essay, objective and applied questions	4	February ¹
		Spring break			February ²
Class	Lecture	Human	Identify the impact of climate	4	March ¹

performan ce and exams	and applicatio n	classifications Climate and human comfort	on human health, comfort, and activity		
Class performan ce and exams	Lecture and applicatio n	Climate and human activity	Identify the impact of climate on agriculture, industry, tourism, transportation, trade, and military operations	4	March ²
Class performan ce and exams	Lecture and brainstorm ing	Climate, agriculture and industry The effect of climatic elements on plant life, as well as the effect of elements on industries	Identify the impact of climate, crop cultivation, and the establishment of industry	4	March ³
Class performan ce and exams	Lecture and brainstorm ing	Climate, trade and transport. The impact of climate on transport routes, vehicles, sea and air transport	Explaining the role of elements in the movement of trade and transportation	4	March ⁴
Class performan ce and exams	Lecture and brainstorm	Climate, tourism and military operations The most important tourism climatic elements and how climatic elements affect	Identify and explain the impact of climate on the tourism industry and the factors behind its development	4	April ¹

	ing	tourism			
Class performan ce and exams	Lecture and applicatio n	Climate and health The effect of climatic elements on the environment of diseases Incidence varies according to the seasons	Explaining the relationship of disease incidence and its relationship to climatic elements	4	April²
Paper exam	theoretical	Exam of the first month of the second semester		4	April³
Class performan ce and exams	Lecture and applicatio n	Climate and architecture Building design and climate	Explaining the impact of climate on the design of buildings in different environments	4	April⁴
Class performan ce and exams	Lecture and brainstorm ing	Construction direction Building materials Window capacity	Explaining the effect of climatic elements through the direction of construction, the size of windows, and building	4	Mays¹

			materials		
Class performance and exams	Lecture and application	Climate, alternative energy and energy consumption	Learn about alternative energy sources	4	Mays²
Class performance and exams	Lecture and application	Solar radiation energy, wind energy, and tidal energy	Learn about solar radiation and wind energy	4	Mays³
Class performance and exams	Lecture and application	Calculate the need for heating and cooling	Learn about the variation in energy consumption and methods for calculating it	4	Mays⁴
Paper exam	theoretical	Exam of the second month of the second semester			May 1
		End of year exams			May 2

11. Course evaluation:

The score is distributed out of 100 as follows:

1– The annual pursuit grade is (50) grades, divided into (20) grades for attendance, participation, and activities, and (30) grades for monthly exams.

2– The final written exam score is (50) points.

11. Course evaluation:					

The score is distributed out of 100 as follows:

1- The annual pursuit grade is (50) grades, divided into (10) grades for attendance, participation, and activities, and (15) grades for monthly exams.

2- The final written exam score is (50) points.

12. Learning and teaching resources:

none	Required textbooks (methodology, if any)
Dr. Safouh Khair, Geographical -1 Research, Its Methods and Methods, .Riyadh, 1990 Methods of geographical research, Abdul -2 Razzaq Al-Butaihi, Mosul, 1988.	Main references (if any)
Khalaf Hassan Al-Dulaimi, Modern -1 Trends in Geographical Scientific Research, Amman, 2010	Recommended supporting books and references (scientific journals, reports).
none	Electronic references, website

Course Description Form

22.	Course Name:	
		Thematic maps
23.	Course Code: /	
		/
24.	Semester / Year:	
		2026-2025
25.	Description Preparation Date:	
		1-10-2025
	26.Available Attendance Forms:	
		Weekly
	27.Number of Credit Hours (Total) / Number of Units (Total)	
		60 hours

28. Course administrator's name (mention all, if more than one name)	
Name : Assistant. Lecturer Ameena Hashim Abduljaleel Email: ameena@uowasit.edu.iq	
29. Course Objectives	
Course Objectives	4.The student should know what maps are and their types 5. the student acquires information about the skills and reading of the thematic map. 6.the student understands how to make international maps individually 7.the student understands the areas of regional and international geography 8.The student learns how to interpret the thematic map. 9.The student should apply the applications of distribution maps and the skills reading them. 10. The student should analyze and interpret a satellite visual or aerial photograph and write the results or draw a map from them 11. The student draws a digital map 12. The student monitors his location using GPS
30. Teaching and Learning Strategies	
Strategy	- Method of Lecture, discussion and brainstorm - Teaching methods include the use of educational technology - Encouraging students to self-learn

31. Course Structure : 1st semester					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	Knowledge and understanding Classification of maps and their types	Classification of maps and their types	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
2	2	Knowledge and understanding The concept of thematic maps and their content	The concept of thematic maps and their content	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
3	2	Knowledge and understanding Definition of thematic map, classification of thematic map	Definition of thematic map, classification of thematic map	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
4	2	Knowledge and understanding Steps for displaying public content and methods for displaying special content	Steps for displaying public content and methods for displaying special content	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
5	2	Knowledge and understanding Methods of displaying phenomena on thematic maps	Methods of displaying phenomena on thematic maps	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
6	2	Knowledge and understanding	Qualitative methods (non-quantitative	Method of Lecture,	QUIZ. and EXAM

		Qualitative methods (non-quantitative) (qualitative) cadastral maps)	(qualitative) cadastral maps)	discussion and brainstorm	
7	2	Knowledge and understanding Types of non-quantitative cadastral maps	Types of non-quantitative cadastral maps	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
8	2	Knowledge and understanding How to create non-quantitative cadastral maps	How to create non-quantitative cadastral maps	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
9	2	Knowledge and understanding Quantitative methods	Quantitative methods	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
10	2	Knowledge and understanding Types of quantitative thematic maps (dot maps, steps for preparing dot maps)	Types of quantitative thematic maps (dot maps, steps for preparing dot maps)	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
11	2	Knowledge and understanding Choropleth cadastral maps	Choropleth cadastral maps	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
12	2	Knowledge and understanding Maps of isolines	Maps of Isopleths	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM

13	2	Knowledge and understanding Methods for creating Isopleths maps	Methods for creating Isopleths maps	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
14	2	Charts (definition of proportional symbols, line symbols, bar symbols, or columns)	Charts (definition of proportional symbols, line symbols, bar symbols, or columns)	Method of Lecture, discussion and brainstorm	QUIZ. and EXAM
15		Exam	Exam		
Course Structure : 2nd Semester

Course description form

1. Course Name:
Geographic thought
2. Course Code:
3. Semester/Year:
The 4th Class / 2025-2026
4. Date this description was prepared:
2025 /10 /1
5. Available attendance forms:
In person
6. Number of study hours (total) / number of units (total):
64/hours 2/units
7. Name of the course administrator (if more than one name is mentioned with the personal email)
1- Dr. Amenah Hassan Niyazi Email: aniyazi@uowasit.edu.iq
8. Course objectives

The course aim to introducing students to the nature of geographical thought and the importance of studying it to know the present in the science of geography.

Objectives of the study subject

9. Teaching and learning strategies

- Interactive lectures and group discussions.
- Reports and daily tests
- Using modern references and sources.
- Use the method of detailed explanation of the lecture topics.
- Using maps.
- Using the lecture presentation method using a projector (data show)

10. Course structure

Evaluation method	Learning method	Name of the unit or topic	Required learning outcomes	hours	the week
Class performance and	Lecture and brainstorming	The concept of geographical thought	Students' understanding of the concept of	2	October 1

exams			geographical thought		
Class performance and exams	Lecture and discussion	The nature of geographical knowledge and its relationship with other sciences	Introducing students to geography and its relationship to other sciences	2	October 2
Class performance and exams	Lecture and brainstorming	Branches of natural and human geography	The student's understanding of the branches of geography	2	October 3
Class performance and exams	Lecture and brainstorming	Geographical thought in antiquity	Introducing ancient civilizations and their importance in the development of geography	2	October 4
Paper exam	theoretical	First month/first semester exam	Essay and objective questions	2	November 1
Class performance and exams	Lecture and discussion	Arab geographical thought	Introduction to Arab geographical thought	2	November 2

Class performance and exams	Lecture and discussion	Arab geographical thought before Islam	The student's understanding of pre-Islamic thought	2	November 3
Class performance and exams	Lecture and discussion	Arab-Islamic geographical thought	The student's understanding of Islamic geographical thought	2	November 4
Class performance and exams	Lecture and discussion	Geographical thought until the end of the Ottoman era	Clarifying the events until the end of the Ottoman era	2	December 1
Class performance and exams	Lecture and discussion	Fields of Arab geography	Introducing the student to the fields of Arabic geography	2	December 2
Class performance and exams	Lecture and discussion	Mathematical and astronomical geography	Know the concept of astronomical geography	2	December 3
Class performance and exams	Lecture and discussion	Descriptive, travelogue and regional geography	Knowledge of the concept of descriptive geography and travel	2	December 4
Class performance	Lecture and brainstorming	The emergence of	Learn about cartography in	2	January 1

Course Description Form

33.	Course Name:		
	Dry regions		
34.	Course Code:		
35.	Semester / Year:		
	annual		
36.	Description Preparation Date:		
	1 / 10 / 2025		
37.	Available Attendance Forms:		
	immanence		
38.	Number of Credit Hours (Total) / Number of Units (Total)		
	60 hours annually. 2 hours per week		
39.	Course administrator's name (mention all, if more than one name)		
	Name: Ali Radhi Muhaisen	Email: alir903@uowasit.edu.iq	
40.	Course Objectives		
	• Definition of studentsIn dry regions And the reasons for its emergence • Identifying dry lands in the world in general, distributing them on various continents, and studying dry lands in the Arab world in particular. • Recognize the importance Climate characteristics in dry regions		

• Introducing students to most of the problems facing dry areas. • Explaining the most important ways in which living organisms adapt in general to face the problem of water scarcity in dry regions. • Identifying the most important solutions for water uses that are characterized by their scarcity in dry areas.					
41. Teaching and Learning Strategies					
Strategy	1. Educational strategy, collaborative concept planning. 2. Brainstorming education strategy. 3. Education Strategy Notes Series .				
42. Course Structure					
Week	Hours	Required Learning Outcomes	Unit or subject name	Learning method	Evaluation method
1	2	Teaching students the importance of dry regions and the reasons for studying them, as well as their classification.	The importance of dry regions	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
2	2	Introducing students to the concept of drought and its different types	Definition of drought and dry regions	PowerPoint Lecture	test (oral-)
3	2	Introducing students to the causes of drought from a natural and human perspective	Causes of dehydration	PowerPoint Lecture	General questions and discussion
4	2	Definition of studentsThe geographical distribution of dry	Distribution of the driest regions in the world	theoretical, theoretic, abstract, notional, perspective, paper,	General questions and discussion

		regions around the world		academic	
5	2	Definition of studentsThe geographical distribution of the dry regions in the Arab world.	Dry areas in the Arab world.	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
6	2	Introducing students to the importance and impact of climate in dry regions	The importance of climate in dry regions	theoretical, theoretic, abstract, notional, perspective, paper, academic	A written test
7	2	Introducing students to climatic characteristics and their importance in dry regions	Climatic characteristics of dry regions	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
8	2	Introducing students to the importance of landforms in dry regions	The geomorphological importance of drylands	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
9	2	Introducing students to the types of landforms prevailing in dry regions	The diversity of desert land forms	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
10	2	Introducing students to the most important deterministic and sedimentation processes	Geomorphological processes prevailing in dry regions	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion
11	2	Teaching students the concept of soil in dry regions in terms of its types and distribution.	The concept of soil, characteristics of desert soils	theoretical, theoretic, abstract, notional, perspective, paper, academic	General questions and discussion

12	2	Introducing students to the most important Problems facing soils in dry regions and how to reduce them and mitigate their effects	Dry soil problems	PowerPoint Lecture	test (oral-)
13	2	Introducing students to the effects of salinization on soil and water	Soil and water salinity challenges	PowerPoint Lecture	test (oral-)
14	2	Definition of studentsTypes and shapes of natural plants and their distributionIn dry regions	Natural plant in dry regions	PowerPoint Lecture	test (oral-)
15	2	Introducing students to the concept of water resources and their importance to people in dry regions	The importance of water resources in dry regions	PowerPoint Lecture	A written test
16	2	Introducing students to the forms and types of water resources	Diversity of water resources	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
17	2	Teaching students the most important uses of water resources in dry regions	Water uses in drylands	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
18	2	Teaching students the most important modern methods in maintaining, developing and sustaining water resources	Modern methods in developing water resources	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)

19	2	Introducing students to agriculture and its characteristics in dry regions	Agricultural resources in drylands	PowerPoint Lecture	test (oral-)
20	2	Introducing students to the industry and its characteristics in dry regions	Industrial production in dry regions	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
21	2	Introducing students to the most important environmental problems and challenges in dry regions	Environmental problems and dangers in dry regions	theoretical, theoretic, abstract, notional, perspective, paper,	test (oral-)
22	2	Definition of studentsThe concept of desertification and its types	The concept of desertification and its types	theoretical, theoretic, abstract, notional, perspective, paper, academic	A written test
23	2	Definition of studentsCauses of desertification, both natural and human	Causes of desertification	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
24	2	Teaching studentsOn the most important modern methods used to reduce and mitigate the problem of desertification	Methods of dealing with desertification	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
25	2	Introducing students to the conceptDroughtAnd its types	Drought problem	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
26	2	Definition of studentsThe causes of soil erosion and its	Soil erosion	theoretical, theoretic, abstract, notional, perspective, paper,	General Discussion and Questions

		environmental effects		academic	
27	2	Definition of students Sand and dust storms, their causes, and their effects on the population	Sand and dust storms	theoretical, theoretic, abstract, notional, perspective, paper, academic	General Discussion and Questions
28	2	Definition of students Types of environmental pollution and how to reduce it	Environmental pollution	theoretical, theoretic, abstract, notional, perspective, paper, academic	A written test
29	2	Definition of students Flood risks in dry regions	Floods	theoretical, theoretic, abstract, notional, perspective, paper, academic	test (oral-)
30	2	Definition of students The most important natural resources and their development potential	Development of natural resources in dry regions	PowerPoint Lecture	test (oral-)

43. Course Evaluation

Distribution is as follows: 25 marks for monthly and daily exams for the first semester. 25 marks for monthly and daily exams for the second semester. 50 marks for final exams

44. Learning and Teaching Resources

Required textbooks (curricular books, if any)	Hassan Ramadan Salama, Geography of Dry Regions, 1st edition, Faculty of Arts, University of Jordan, 2010.

45. Course Name:
Hydrology
46. Course Code:
47. Semester / Year:
annual
48. Description Preparation Date:
1 / 10 / 2025
49. Available Attendance Forms:
immanence
50. Number of Credit Hours (Total) / Number of Units (Total)
60 hours annually. 2 hours per week
51. Course administrator's name (mention all, if more than one name)
Name: Prof. Dr. Hussein Karim Hamad Al-Saadi Email: husainwadi@uowasit.edu.iq

52. Course Objectives	
1) Enabling students to use scientific methods 2) Recognizing the importance of studying hydrology 3) Educating students about problems related to water 4) Developing cognitive skills and developing water sense 5) Developing students' ability to monitor alternative water sources 6) Introducing students to the future effects of water shortages.	

1. Course Name:
Geographic techniques
2. Course Code:
3. Semester/Year:
The second phase / 2025–2026

4. Date this description was prepared:	
2025 /10 /1	
5. Available attendance forms:	
in person	
6. Number of study hours (total) / number of units (total):	
120/hour, 4/units	
7. Name of the course administrator (if more than one name is mentioned with the personal email)	
1– M.M. Aseel Jassim Mohammed	Email: <u>aseeljassim@uowasit.edu.iq</u>
8. Course objectives	
Introducing students to the basic concepts of geographical techniques. Highlighting the components of digital maps, with a focus on remote sensing systems (Rs) and the (Arc map10.8) program. Enabling students to deal with digital maps independently and developing students' skills by designing and implementing an integrated study project and mapping	Objectives of the study subject
9. Teaching and learning strategies	

Using the direct application method by the teacher on the blackboard

Involve the student to solve some applications related -2 •
to the paragraph

In the practical aspect, the exercises are re-executed by -3 •
the teacher and teaching assistant

The student is asked to carry out the exercise under the -4 •
direct supervision of the teacher and teaching assistant

The student's work is evaluated and detailed notes are •
made on his work so that he can avoid it in the future

Evaluation methods •

Conducting exams for theoretical and practical subjects •

10. Course structure
